1. Introduction

This study focuses on web marketing analytics using Google Analytics 4 (GA4) data from the Google Merchandise Store. An in-depth analysis is conducted across key areas, including audience, acquisition, behaviour and conversion. In this section, user behaviour patterns are identified, traffic sources are analysed and key areas of concern are identified, followed by recommendations to improve user engagement.

2. Web analysis

For this analysis, the time frame was selected as 01/12/2025 to 31/12/2025. During this period, the website recorded approximately 50,000 active users and 38,000 new users.

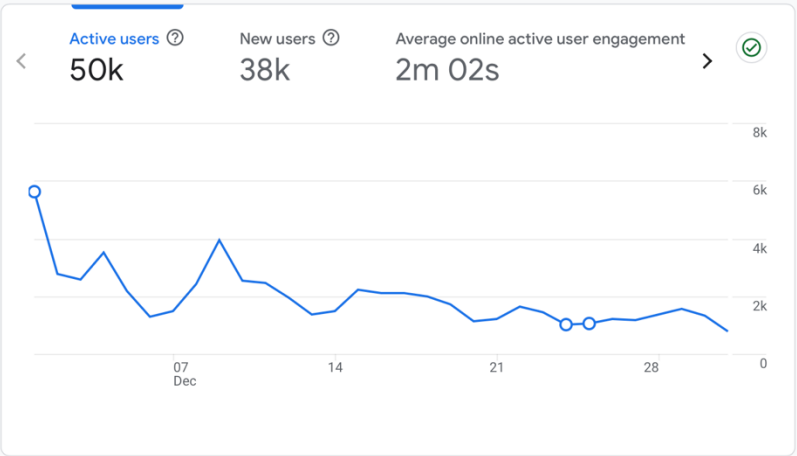

Figure 1: User behaviour (01/12/25 - 31/12/25)

2.1.Audience

According to the *Figure 2*, most active users visited from the United States with more than four times the number of users compared to India, the second largest source of traffic. This suggests that the website has a strong demand in the US market while also attracting international audiences, particularly from the Asian region including India, China, Taiwan.

		Country	Active users	New users	Engaged sessions	Engagement rate	Engaged online sessions per active user	Average online active user engagement time	Total revenue
☑		Total	51,044 100% of total	38,474 100% of total	47,797 100% of total	58.47% Avg 0%	0.94 Avg 0%	2m 02s Avg 0%	$320,890.46 100% of total
☑	1	United States	28,788 (56.4%)	20,179 (52.45%)	30,265 (63.32%)	62.67%	1.05	2m 39s	$299,092.60 (93.21%)
☑	2	India	6,495 (12.72%)	5,924 (15.4%)	5,488 (11.48%)	64.53%	0.84	1m 01s	$1,474.66 (0.46%)
☑	3	China	1,912 (3.75%)	1,532 (3.98%)	297 (0.62%)	14.57%	0.16	13s	$0.00 (0%)
☑	4	Canada	1,875 (3.67%)	1,338 (3.48%)	1,903 (3.98%)	62.95%	1.01	1m 53s	$11,392.93 (3.55%)

Figure 2: Demographic details by country (01/12/25 - 31/12/25)

However, India demonstrates a higher engagement rate (64.53%) compared to the United States (62.67%), indicating that Indian users are more actively engaged. Although China accounts for 3.75% of total users, its engagement rate is significantly lower (14.57%), suggesting lower quality traffic. The United States contributes 93.21% of total revenue, indicating that US users are more likely to complete the purchase.

Traffic patterns show that user activity is lower during weekends compared to the weekdays. From 01/12/2025, a gradual decline in user activity is observed over the first three weeks. This suggests that users are more likely visit the website during working days, reflecting behaviour like working professionals.

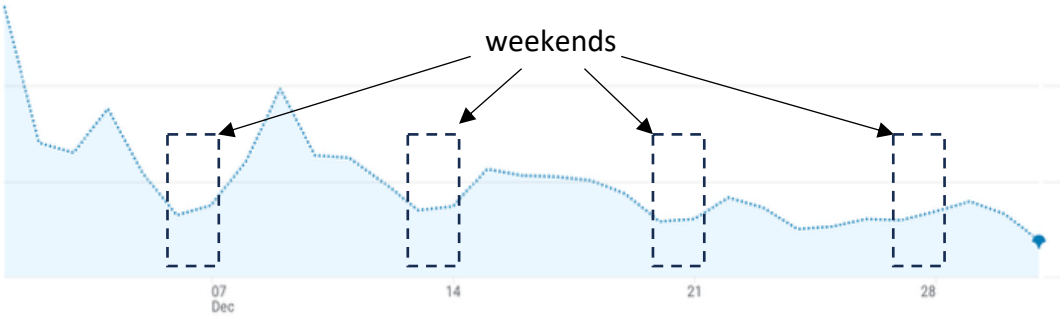

Figure 3: Traffic pattern (01/12/25 - 31/12/25)

To further examine this pattern, a bar chart was created for the selected time frame (01/12/2025 – 31/12/2025), comparing the average number of active users on weekdays and weekends. The results clearly indicate higher user activity on weekdays during the initial weeks of the period.

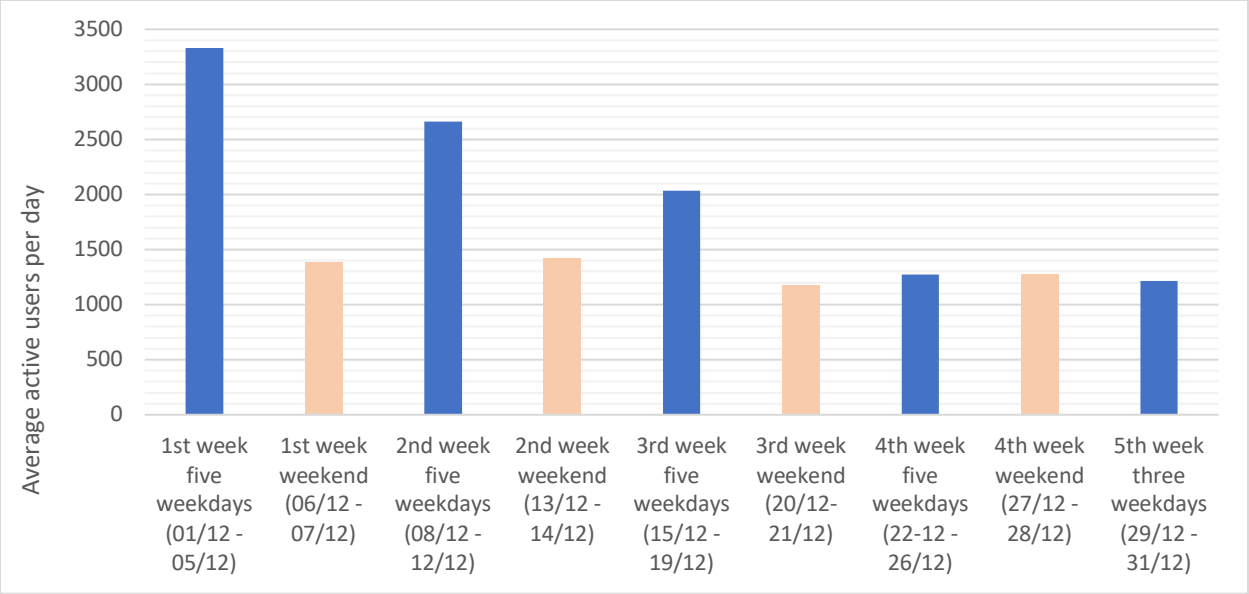

Figure 4: Average active user graph (01/12/25 - 31/12/25)

2.2.Acquisition

Most of the website traffic originates from direct (31.73%) and organic search (29.59%) channels, suggesting strong brand recognition among users. Paid search contributes a smaller proportion of traffic (10.86%). However, engagement rates present a different pattern, with email (74.79%) and referral (74.16%) channels shows the highest engagement rates. Although paid search accounts for 10.86% of total traffic, it achieves a relatively high engagement rate (71.07%), exceeding that of direct (57.03%) and organic search (66.49%).

Traffic acquisition: Session primary chan... Custom 1 Dec - 31 Dec 2025

Plot rows | Search... | Rows per page: 10 | Go to: 1 | 1-10 of 11

		Session primary...channel group)	↓ Sessions	Engaged sessions	Engagement rate	Average online session engagement	Total revenue
☑		Total	80,793 100% of total	47,312 100% of total	58.56% Avg 0%	1m 16s Avg 0%	$320,890.46 100% of total
☑	1	Direct	25,636 (31.73%)	14,621 (30.9%)	57.03%	1m 19s	$120,847.08 (37.66%)
☑	2	Organic Search	23,906 (29.59%)	15,894 (33.59%)	66.49%	1m 05s	$74,172.60 (23.11%)
☑	3	Paid Search	8,777 (10.86%)	6,238 (13.18%)	71.07%	1m 30s	$35,575.73 (11.09%)
☑	4	Unassigned	7,758 (9.6%)	884 (1.87%)	11.39%	49s	$8,074.04 (2.52%)
☑	5	Email	6,609 (8.18%)	4,943 (10.45%)	74.79%	1m 53s	$47,417.35 (14.78%)
☐	6	Referral	3,011 (3.73%)	2,233 (4.72%)	74.16%	1m 42s	$16,510.34 (5.15%)

Figure 5: Traffic acquisition (01/12/25 - 31/12/25)

This indicates that while direct and organic channels generate high traffic, they attract comparatively lower quality engagement. Paid search, email, and referral channels generate lower traffic but higher engagement, suggesting that users from these sources find the content interesting and relevant and more likely to remain on the website. When analysing revenue contribution, direct traffic accounts for the largest share (approximately 37%). Interestingly, email contributes a higher proportion of revenue (14.8%) than paid search (11.1%), despite generating lower traffic. Therefore, increasing traffic from email channels could significantly enhance overall revenue.

2.3.Behaviour

According to *Figure 6,* users are actively engaging with the website generating total of 1,468,619 events with an average of 29 events per user. This suggests user's strong engagement with the website. The page_view is the most frequent event (26.2%), followed by view_item_list (25.1%) suggesting users are actively browsing product listings. However, while view_item_list exceeds 368,000 events, view_item occurs only 65,000 times. This is a significant drop, indicating only a few users who click into the products after browsing the website. This may be due to the product attractiveness or website layout. Over half of the users (56.98%) scroll, indicating they engage with the content, but the other half leave the website early or click on something.

	Event name	Event count	Total users	Event count per active user	Total revenue
	Total	1,468,619 100% of total	59,084 100% of total	29.09 Avg 0%	$320,890.46 100% of total

Figure 6: User behaviour - events (01/12/25 - 31/12/25)

Under the user engagement, users are actively engaging with the website with total 382,075 page views and 2 min 2 sec of average engagement time. The most visited page is the /shop/new (excluding the home page) with an engagement time of 53 seconds. /shop/apparel/mens also has a higher engagement time of 1 min 17 secs, suggesting users are more interested when they are browsing products. The checkout page shows the 6.91% of total views however, it has the highest

engagement time of 2 mins 27 secs. This indicates, only a limited number of people reaching this stage with a purchase intent.

Figure 7: User behaviour - page (01/12/25 - 31/12/25)

2.4.Conversion

The website generated total of 2,120 transactions and generates $320,890.46 in revenue, resulting an average order value of $151 per transaction. This suggests customers are spending a relatively high amount per purchase. Based on 80,793 of total sessions, when considering the 2,120 purchases, the estimated conversion rate is around 2.6%.

Transactions: Transaction ID | Custom 1 Dec - 31 Dec 2025

	Transaction ID	E-commerce purchases	Purchase revenue
	Total	2,120 100% of total	$320,890.46 100% of total
1	2181673	1 (0.05%)	$0.00 (0%)
2	2181947	1 (0.05%)	$0.00 (0%)

Figure 8: Conversions - transactions (01/12/25 - 31/12/25)

This conversion analysis shows a total 64,291 product views, including, 55,193 added to cart actions and 19,298 items purchased, generating $33,541.87 in revenue. From viewed items to added to cart conversion is approximately 86%, suggest the strong purchase intent of the users.

Items in the cart to purchase conversion is around 35%, suggesting possible issues in the checkout process.

Plot rows | Search... | Rows per page: 10 | Go to: 1 | 1-10 of 430

		Item name	Items viewed	Items added to cart	Items purchased	Item revenue
		Total	64,291 100% of total	55,193 100% of total	19,298 100% of total	$332,541.87 100% of total

Figure 9: Conversions - products (01/12/25 - 31/12/25)

3. Key trends

The main trend observed is that most users are from United States contributing around 93% of the total revenue. Although business attracts global traffic, it's highly dependent on US market. During the selected time frame, traffic levels were comparatively higher on weekdays. This suggests that users are more likely to visit the website during working days, reflecting behaviour similar to working professionals.

Direct and organic search channels generate most of the traffic, but they demonstrate comparatively lower engagement compared to E-Mail and referral channels. Users show strong interest in browsing products, with page_view (382,000) as the most frequent event, followed by view_item_list (368,000) suggesting users actively engage in browsing product listings. Furthermore, a high conversion rate (approximately 86%) from product views to add_to_cart actions suggest strong purchase intent.

4. Areas of concern

A key concern is that while frequently browse product listings, but majority of the users do not click and view individual products as view_item_list event happened around 368K, but view_item was only 65K, resulting only 17.7% of listing views led to a product view. Another major drop off was visible in the purchase stage. From adding cart to the purchase, conversion reduced up to 35% suggesting many uses do not complete their purchase at the final stage.

Channel inefficiencies were identified as the areas of concern. Direct and organic channels generate high traffic but fails to engage the users compared to other channels with lower traffic. On the other hand, email and referrals generates very low traffic compared to direct and organic channels but shows high engagement, indicating a missed opportunity to grow the revenue.

5. Recommendations

5.1.Optimise checkout process

The conversion rate from product views to add to cart is high (approximately 86%), however, conversion from cart to purchase declines to around 35%, suggesting possible issues in the checkout process. Therefore, reassess the checkout process and make it user friendly and simplify. Identify which demographics mainly responsible for not completing the purchasing step and analyse if there any unexpected costs including tax or additional shipping for that group.

5.2.Improve web page layout

After browsing the product list, only 17.7% of them click and view a specific product. This indicates a major problem in the product display. Therefore, improve product images and descriptions. Add reviews or ratings with the product tile and this will influence user to click the product and see. Add an option to see how many people view that specific item today on the product listing, it will influence user to view the product. Google merch account already highlights their best sellers and discounts and maintain that option.

5.3.Scale high performing channels

Users who visited the merch shop via email high engagement rate, but email generates less traffic than direct, organic, and paid search. Therefore, initiate email campaigns to attract new users, provide personalised offers and discounts if they made their first purchase via email. Referral shows the same behaviour as email, generates lower traffic (3.7%) but resulting very high engagement (74%). Therefore, collaborate with blogs, influencers, review websites and ask them to review the products and add the website link.

5.4.Improve traffic quality (SEO & Paid Ads)

Direct and organic generates high traffic but results lower engagement. This suggests that a part of users visiting by SEO and paid campaigns may not find the content very engaging to their interest. Therefore, refine keywords targeting to focus on user interest search terms, optimise the advertisements to achieve user expectations. Also, remove irrelevant keywords from paid campaigns to avoid attracting the wrong audience. A/B test can be used to test which advertisements performs better to improve engagement and conversions.

5.5.Expand to new markets

Most active visitors came from United States and its more than four times compared to India. However, India shows a higher engagement rate of 64.53% than United States 62.67%. Therefore, it is recommended to target other countries and give priority which has a high engagement rate with the website. Localise the website content by changing the language, currency and offers.

6. Conclusion

From the web analytics section it is revealed that most users are from United States, which contributes significantly to the traffic and revenue. Although direct and organic channels generate the highest traffic compared to other channels, email and referral channels produce higher engagement rate. Users show interest in browsing products and adding them to carts but a significant drop off is identified between product viewing and checkout stages. These concerns were identified as opportunities and provide recommendations are provided to improve overall marketing efficiency.
